Panel Lifter

Description

Rhino panel Lifter provides safety, versatility, and ease to a multitude of materials handling applications. Whether you need to lift, move, grab, secure or hold non-porous materials, our hand-operated vacuum lifters will make your job easier.

Single Cup

PL-101

Details:

- 125mm diameter vacuum suction cup
- 100mm height
- Recommended lifting capacity is 15kgs

This model features a sleek, strong steel handle. Simply squeeze the lever handles together to create a strong continuous hold, and separate them to break the seal. This is a nifty, compact design that offers a surprising strong hold. This model is different from the double cup model in that it is only for lifting a floor tile momentarily and not for carrying a floor tile.

Dual Cup

PL-102

Details:

- 110mm diameter vacuum suction cup
- 250mm length
- 140mm height
- Recommended lifting capacity is 30kgs

This model features a sleek, strong aluminum handle. The vacuum created by double cups allows easy lifting of heavy weights. Simply place your lifter onto the floor tile and press down, forcing out the air underneath the vacuum cups, and you will create a powerful vacuum hold. The suction is broken when the fingertip-operated bar is lifted.

Triple Cup

PL-103

Details:

- 110mm diameter vacuum suction cup
- 100mm height
- Recommended lifting capacity is 50kgs

This model features a sleek, strong aluminum handle with a contoured underside for a sure grip. Simply press the levers down to create a strong continuous hold. Lift up on the levers to break the suction. You will be astonished with its holding power.
